14 - What techniques, processes, activities, materials, etc. were most helpful and least helpful to you in this course and what additional comments would you like to provide to aid the instructor?

Aaron Enriquez

Response Rate	52/98 (53.06%)
----------------------	----------------

- I really liked the PollEverywhere questions, and being able to see how what we were going over in class could be put on an exam as well as how it tied into other topics we covered. This was my favorite class of the semester
- This teacher did a good job, and I learned a lot.
- Great Instructor
- I enjoy the poll questions in class although there has been an occasion or two when internet access/phone data access has hindered the use of the tool.
- When he draws with marker on the board at the front it is very difficult for anyone not in the first few rows to see visibly.
- I love this course. The notes and the feedback on each and every assignment helped me a lot. The review before the exam was much helpful.
- I think just need to narrow down notes. Make the content smaller or more contained so it is less confusing.
- I felt like this class was a complete waste of time for me after taking macroeconomics last semester. There was nothing in this course that we learned that I hadn't learned before. It made it difficult to sit through long lectures of the same stuff with the professor going through step by step elementary level math with a classroom full of college students. The professor was very good, I wish I'd learned all this information from him first rather than second. He does a good job teaching rather than just lecturing.
- Awesome guy
- He is very personable and a great teacher. He is always there to help and does a great job at what he does! He listens to all sides of a situation and gives the pros and cons to each. He is a great teacher .
- Aaron is a very thoughtful teacher. He has helped me so much with navigating through the course and genuinely wanted to help. I appreciate him as a teacher and as person! He is so great and I would highly recommend this course! I think the only criticism I have is using Excel for the homework is really hard. I feel like I spend more time trying to figure out Excel then I do trying to figure out the content. I also wish we had more review sessions for the test! It seems to be part common sense on the tests which is really hard so more practice would be great!
- He did good!
- Quality dude 10/10 would recommend to a friend
- I loved going to Aarons office hours he was the major reason I am doing so well in this class.
- I really like the career series panels that he added to the course so we can see how to actually apply this class to real life and in the workforce. I didn't like the excel homework assignments and test prep was okay... hard to prepare for the short answer problems.
- Everything was good. He's a good teacher.
- The notes were very well done and very helpful. I also liked the assignments, they were really good recaps of the lectures and then helped a lot on the exams. I think Aaron offered a lot of opportunities to make up points. He is also extremely approachable and willing to work with you.
- You make simple things sound complicated, I think this was a good thing because ti made the tests and homework seem easy compared to what was presented in class.
- Doing board work really helped and not just going over slides.
- nothing.
- I like how engaged Professor Enriquez is. He seems to be invested in the subject and uses poll everywhere, board work and verbal examples to make sure people understand the material. I like the use of both power point notes for general content and then actual note taking and examples used to illustrate the more in-depth concepts and equations. I like the fact that poll everywhere stuff counts for participation and quizzes. As a better test taker I would like to see the grade more weighted on tests as opposed to assignments. I think the assignments were engaging, forced students to demonstrate what they had taken away from class and employed valuable tools like excel. The professor responded in a timely manner to all questions I had even outside of office hours. I definitely think he went above and beyond in this regard. I don't think I've had any other professor get back to me so quickly and with such helpful answers. I would definitely take a course taught by this professor again. He makes the course accessible for the level of material he is teaching, but not so easy that you can just not show up to class. Overall a very enjoyable experience even if it wasn't in a field I was particularly interested in.
- I really liked to take this class. Especially, I want to emphasize how professor tried to contact to students. And assignments are very strongly related to lecture in class, it helps people understand materials in effective way. Taking quiz during the class period is impressed and I think it is working well. Guest speaker were giving interesting stuff something exists in economic. I would recommend keep doing it for students.
- I think all of the in class example problems are very helpful and the lectures do a good job of teaching the material. The areas of the course that I struggled with the most were the programs in which homework was conducted. Although excel and r studio are perhaps good programs, I think it is slightly unfair and inaccurate reflection of our comprehension of actual class material to have to learn how to use the programs themselves which is completely unrelated to the course material. Although help was available to learn these programs, it just simply put a seemingly unnecessary extra struggle and burden on all of the homework assignments to where our actual understanding of the course material itself was not all that mattered. Aside from the use of these programs I enjoyed the class.
- I liked how homework was actually worth something!
- Aaron put a great deal of preparation and effort into his lectures and that definitely showed. Aaron has everything laid our before and during the course so we always knew what was expected of us and when. I would recommend having a tighter grip on the classroom and really taking charge while class is in session.
- The techniques, processes, activités, materials, and the aspects of the course did all seem helpful, but some hard aspects did seem rough to really grasp the concepts. The course was interactive with speakers as well, helping with the college of business feel. The notes could possibly go at a little bit of a slower pace, but maybe I'm just slow at taking notes! Thank you!
- I liked the interaction with the students that he had and how he was very proactive about wanting students to ask questions
- iPad notes were very helpful and going in depth about the material we are learning.
- Being able to go over homework is a huge help. Thank you
- The use of excel and introduction to the program R. I gained a lot of experience in excel and it's actually helped me find a job after school
- Very good teacher, gives more than enough time to do assignments. Helps the class out alot! Thank you for everything
- I think that using excel for projects has strengthened my ability to navigate excel and work with complex problems to solve what I a trying to find. I also believe that he makes class interesting by using poll everywhere because, it keeps you engaged on the topics.
- The time to complete assignments
- This is a fairly large course, but Aaron has it dialed in. He has methods of keeping everyone in the class involved and engaged. His feedback is constructive, and he has a desire to make everyone understand what he is trying to teach. He believes in his ability and it shows. His ability has allowed me to understand Microeconomics. He can connect everything to real world, and that helps me out most. A lot of teachers cannot do that, and if they figured out how to do it, I would be a much better student. Great guy, great professor, and I wish he taught more classes because I wouldn't hesitate to enroll in them.

Response Rate: 73/98 (74.49 %)

- I thought that he was very helpful and kind and made sure that anyone that needed help could always come to his office hours. His grading was very fair and he never tested us on material that had not been provided.
- Teacher was very helpful when asked questions and respectful.
- The availability of the professor was very helpful.
- I really enjoyed the speakers and videos we watched in class, they are good visual tools. More of those. A little scary but impressive that you learned all of our names, continue to do that.
- In class, for notes on the iPad, Aaron writes a lot, so its hard to keep up. But if you show up to his office hours he is a big help.
- I like bringing in guests to speak, playing games to understand, and the excel assignments. I don't have anything that was least helpful.
- I feel like the note packets were the most helpful part of this course. The board work to me wasn't the most helpful because it would go quite quickly and i would be behind and then some equations would not make sense to me. I think that sending out the board work later would be helpful so that you could see any parts that were missed earlier.
- The most helpful was the lecture notes
- He took notes with the class so we never felt rushed. Also he helped whenever we needed at office hours
- What was most helpful was the class activities we did. I also thought the guest lecturers were helpful as well. I really enjoyed the real life examples they brought which tied into the material we were learning. I do not have anything to say that was least helpful.
- Aaron did a great job explaining assignments and ensuring the class knew what was expected for said assignments.
- When we did activities in class, the material we covered stuck because it was interactive. The PollEv questions were also really helpful to remember key concepts. What was most difficult was following along with notes because I do not write very fast.
- I feel that overall professor Enriquez did a phenomenal job of making the material relatable, understandable, and even fun to learn. I really enjoyed his teaching style and feel that I actually learned the material due to his teaching style. His explanations were thorough, his connections were clear, and it helped make the material that much easier to retain. I really enjoyed this class, and I really enjoyed having Aaron as a professor!
- The only thing about this course was that the way the material was presented was hard to get used to at first. Switching from PowerPoint to the iPad was new to me and I had to adjust to that style. But after I did adjust it was much easier to learn the notes and understand the concepts.
- A-A-Ron was a great teacher!
- Aaron's class required lots of work but it was not overwhelming. He is very considerate by making polls to get the opinion of the majority before ruling a decision himself. His office hours are drop in, and responds to emails in a very timely matter. He wants you to understand the content and helps willingly. Really seems invested that you understand the content. I appreciate that in a big class of 80+ students he tries to know the names of the students. Liked the real world examples used in units. His board work can occasionally be fast. Necessary to take your own time after class to go over my notes, because otherwise in class I find I am not completely grasping everything because I just trying to get all the board work down since it is all vital. Hated that the first midterm was on Excel. Maybe have it half excel half written next time? It was awful. Of course people are going to work together even if you tell them not to. Still very happy to have learned Excel moderately well. Would be nice if the graphs were annotated with less writing and more symbols and abbreviations (in the poll everywhere questions too when asked to interpret the graph... everyone learns different though so idk) Liked the class and economics but I don't think it is for me ultimately. Honestly I am ending the class with a feeling of incompetence and incomprehension of microeconomics overall. Everything seemed so scattered. I'd show to class everyday, spent hours on the homework, studied, and went over notes and found it very disappointing and discouraging when my exam scores were always below class average.
- Over the past few months I have spent taking this class, I learned a lot and it was also very fun! I think Aaron Enriquez did a very good job in the way he delivered his lessons by making sure we could understand and also allowed us plenty of time to practice and offered many opportunities for us to further our understanding of the material. I thought his assignments were very well thought out and really helped prepare us to take the exam. Overall, I loved this class and I would not want to have any other professor because Professor Aaron Enriquez really makes himself available to students when they need help and as a student who really values some extra help I really appreciate that. I thought this is was a great class!
- You were great!
